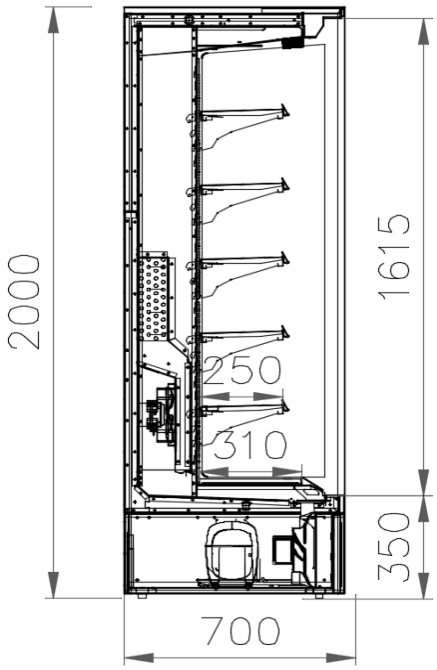
CROSS-SECTION	INFORMATION



temp. class: 3M1
working temp.: -1/+5 C
power suppy: 230V/50Hz
refrig. supply: PLUG-IN
refrigerant: R290
defrosting: air
fans: electrical
lighting: horizontal
no of rows: 2 single
kind og lighting: LED
doors: tempered double glass (4 +10 +4)
type: hinged
opened: left/right

NOTICE
** development version*
The information included in the Technical Data of device refers to certain equipment defined in the first page.All values and parameters are defined on the basis of standard PN EN ISO 23953 for the given temperature class, range of temperature and equipment

RECOMMENDATIONS
The correct work of devices enables its non-failure work with energetical rated parameters
Complying with the rules of device loading guarantees the stable temperature parameters of stored products Properly selected operating parameters allow you to greatly reduce the cost of electricity consumption.

Notice
Automatic control system should ensure deicining from evaporator and removal of water.
The devices in line must be controlled dependently. The contorl system of particular devices in line must synchronize the start and end of defrosting process
The defrosting process should be managed by temperature. 9-th parameter should be treated as emergency.
If the parameter number 4 is set on "no" value, the fans work depends on temperature value of defrosting probe (parameter no 5). During the dripping time of evaporator the fans dont work.
The correction set point by night ensures the correct device work with closed curtains. The parameter beneficially influences energy savings.
If it is necessary, please modify parameters to provide good work of device.

NOTICE

To arrange a device you need to ensure its correct vantilation. The surfaces of side glass must be moved from walls in order to guarantee air flow to dry them. To ensure the correct work the refrigeration devices must be moved from a wall on the distance of 50mm (remote device) and 100mm (plug-in).
