NOTICE

* development version

The information included in the Technical Data of device refers to certain equipment defined in the first page. All values and parameters are defined on the basis of standard PN EN ISO 23953 for the given temperature class, range of temperature and equipment

RECOMMENDATIONS

The correct work of devices enables its non-failure work with energetical rated parameters Complying with the rules of device loading guarantees the stable temperature parameters of stored products Properly selected operating parameters allow you to greatly reduce the cost of electricity consumption.

THE MANUFACTURER RESERVES THE RIGHT TO ALTER THE FEATURES AND TECHNICAL SPECIFICATIONS OF ITS PRODUCTS.

1.LOCALIZATION OF CONTROL PROBE S1 CONTROL PROBE									

Notice

Automatic control system should ensure deicining from evaporator and removal of water.

The devices in line must be controlled dependently. The contorl system of particular devices in line must synchronize the start and end of defrosting process The defrosting process should be managed by temperature. 9-th parameter should be treated as emergency.

If the parameter number 4 is set on "no" value, the fans work depends on temperature value of defrosting probe (parameter no 5). During the dripping time of evaporator the fans dont work.

The correction set point by night ensures the correct device work with closed curtains. The parameter beneficially influences energy savings.

If it is necessary, please modify parameters to provide good work of device.
